

External Supplier Password reset Help:

Suppliers should use “Forgot Password” link to reset the password, this means Suppliers once logged into system, they cannot reset the password.

The image shows a user login interface. It features a light blue decorative shape in the top left corner. Below it are two input fields: the first is labeled "User ID" and the second is labeled "Password". Below the password field is a yellow button labeled "Forgot Password". Underneath that is a blue button labeled "Sign In". At the bottom is a dropdown menu currently showing "English" with a downward arrow.

They should not use this menu to reset the password, as by design this will show them the message “**Single sign-on is enabled. Contact your system administrator for password reset.**”, so this should be avoided.
