

IQVIA Health Research Space

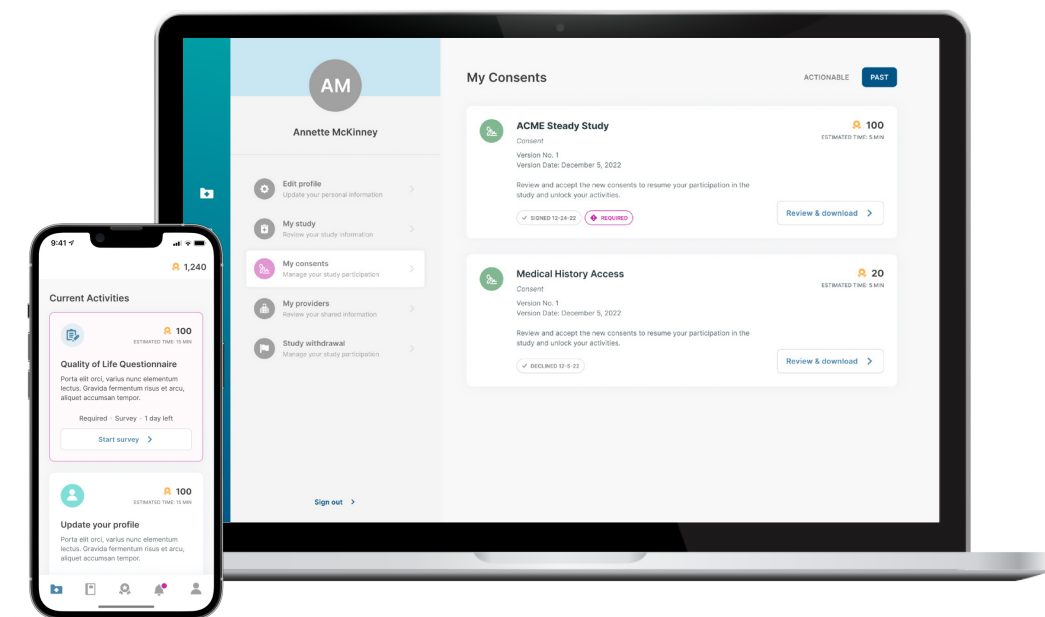

IQVIA's direct-to-patient data collection and engagement platform for real world research

A number of trends are increasing the demand for direct-to-patient data collection and engagement solutions in real world evidence generation. Payers and regulators are demanding longer follow-up periods, healthcare management is moving away from traditional sites, and patient centered outcomes and participant diversity are growing in importance.

IQVIA's Health Research Space platform is designed to meet the needs of real world decentralized and hybrid studies by providing an intuitive, all-in-one direct-to-patient data collection and engagement platform.

Key features of the platform:

Data collection and study monitoring

Form-based data collection — patients can complete electronic Patient Reported Outcomes, surveys and questionnaires

Electronic Medical Record (EMR) provisioning and integration — authorized by patients for EMR sharing across providers

Study monitoring and reporting — near real-time monitoring of enrolment, task compliance and drop-out

Quality management — integration with data management operational processes to ensure data quality and integrity

Patient engagement and retention

Key Benefits of Health Research Space

FOR STUDY PARTICIPANTS	FOR SPONSORS
<ul style="list-style-type: none"> • Simple and easy to navigate user interface and experience based on consumer best-practices • Clear and transparent documentation on the study objectives and data privacy • All-in-one data collection platform – easier engagement and s patient journey seamless • Reduced or eliminated site visits for study activities • Provision of study or disease-related information to participants • Participants can see their points accrue for completing study tasks, and can decide when to redeem • Access to additional support services including a dedicated help desk 	<ul style="list-style-type: none"> • Fully integrated technology and operational delivery, enabling greater control and accountability for end-to-end data quality • Increase access to broader patient pools, reduce site burden and increase diversity, inclusion and representativeness • Real-time study monitoring for virtual site staff • Variety of data collection enabled within one platform – greater depth of study outcomes and stronger evidence generated • Engagement features support participant retention, increasing study outcome validity and return on investment • Secure storage and use of participant data, adhering to global privacy and regulatory standards
