

IQVIA Health Data Catalog

One stop self-service shop to quickly identify the right Real World Data for your research project

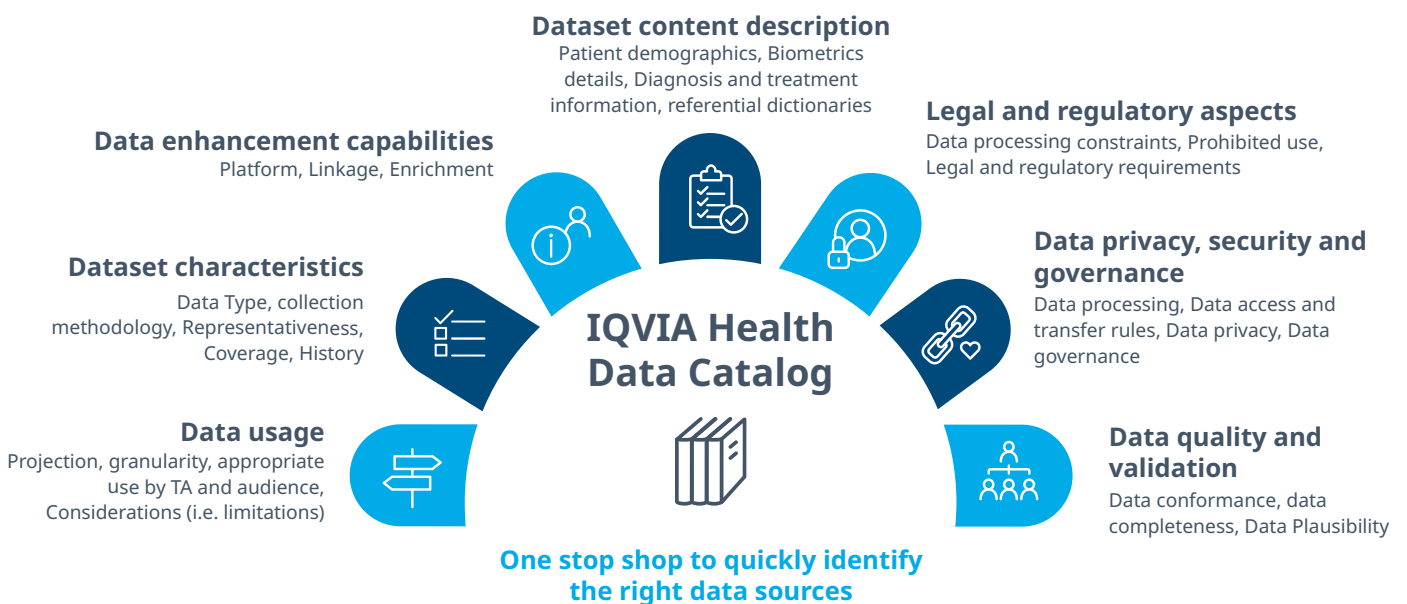

Reduce the time-consuming process to find the right data assets to answer your research questions. IQVIA Health Data Catalog enables you to quickly identify and evaluate data, with the ability to search and filter an extensive criteria list.

Explore +200 variables describing patient data across +2000 data assets*

IQVIA Health Data Catalog covers a wide range of assets, including IQVIA proprietary assets, partnerships and collaborations.

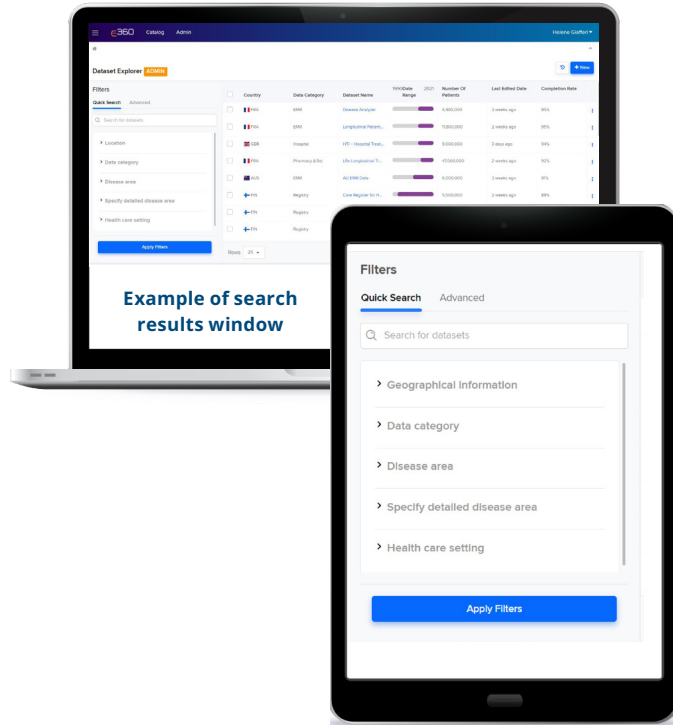

It includes a broad scope of descriptive characteristics including data type, content, coverage, usage considerations, legal and regulatory aspects and more. Information is kept up-to-date through a collaborative process governed by the RWD Assets team, involving global and local RWD experts, to provide a single version of truth.

* Today close to 200 assets deeply qualified

Powerful search and filtering capabilities

Such as geography, disease / therapeutic area, key variables & more, to enable rapid and easy data asset identification.

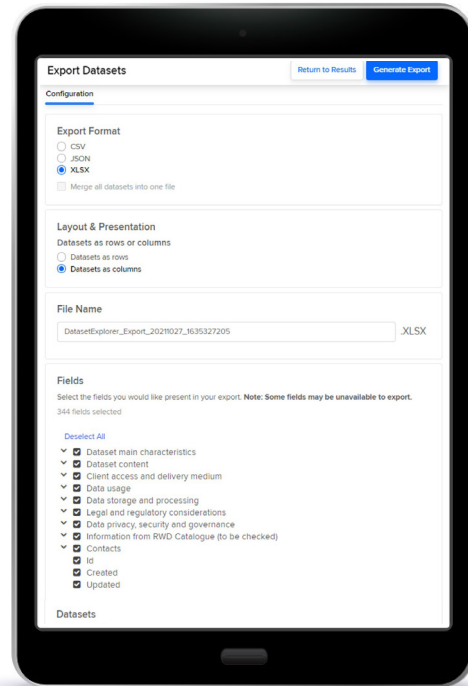

Example of search results window

Quick search and advanced search tools

Customize, export and share the results

Once you have identified the data sources that best meet your needs, you can then customize, export (.xlsx, .csv, .json, ...) and share the selected variables about your assets of interest.

Export customization
