

IQVIA[™] SiteZone

Efficiently manage workflow between Sites, Sponsors, and CROs and promote better collaboration.

ADVANCED AND INTUITIVE INTERFACE

Let IQVIA[™] SiteZone manage the workflow between sites, sponsors, and CROs by giving your teams an easy-to-use solution for collecting documents from sites and for providing sites with the documents needed for the Investigator Site File (ISF).

CONNECT GLOBALLY

Stay connected across all your sites and make it easier for sites to receive and submit content and sign documents. Provide users with a simple, intuitive web interface offering role-based dashboards and instinctual navigation features to minimize training, maximize efficiency, and improve end-to-end productivity.

PROMOTE COLLABORATION WITH SITES

Automate Delivery of Documents to Your Sites

SiteZone automatically delivers the documents needed for filing in the Investigator Site File as soon as they are final - without the need to manually create packages or push documents to the site.

Reduce Document Collection Burden from Your Sites

As documents are nearing their due date, SiteZone automatically requests them from the site. Site users update in one click, without the need to provide metadata - SiteZone already knows where to file documents in eTMF without additional site input.

Eliminate Hard Copy Collection and Storage

SiteZone automatically requests electronic signatures from site personnel wherever required, eliminating the need to collect wet ink signed paper copies. SiteZone can even collect and report on acknowledgments for documents such as safety reports.

FACT: Site-level documents account for over **80%** of the average TMF.

HELP MANAGE USERS

Users are automatically created based on information from CTMS or manually created by the CRA or other authorized personnel.

- Managing User Credentials
- Tracking completion of required training
- Managing forgotten password requests
- Alerting Sponsors to any changes in vital information

DECREASE BURDEN

Reduces the heavy administrative site-level burden by managing and organizing eTMF and site information, documents, and requests for you.

- Organize trial and site information more efficiently
- Promote and improve site collaboration
- Manage eTMF and site documents seamlessly

Reduce CRA Burden

CRAs no longer have to request documents, handle documents returned in email, or maintain Excel trackers. CRAs no longer have to reconcile site documents and can see site completeness, quality, and timeliness of submissions with one click.

Empower the CRA

The CRA is the site expert on activities. They can easily monitor the progress of individual sites, identify site personnel, provide study access by role, review site activities and status, and deactivate users without IT support.

CRAs can:

- Monitor coming and past due documents
- Monitor metrics on completeness and quality
- View the site's provisioning history

User Home Page

First-time users watch a training video and then gain access to their home pages, providing a list of their sites-which can be across multiple sponsors or investigational products.

Study Information

Provides CRA contact information, site milestones, and a list of site personnel, and allows sites to compare their performance on KPI's

Document Library

A library of essential documents where qualified users can download copies of individual documents or download all documents to support their ISF.
