## IN THIS EXCERPT

---

The content for this excerpt was taken directly from IDC MarketScape: Worldwide Worldwide Life Science Sales and Marketing Digital Transformation Services 2020 Vendor Assessment (Doc # US42724918). All or parts of the following sections are included in this excerpt: IDC Opinion, IDC MarketScape Vendor Inclusion Criteria, Essential Guidance, Vendor Summary Profile, Appendix and Learn More. Also included is Figure 1.

## IDC OPINION

---

Digital transformation is occurring at a rapid pace in life science companies, including in the sales and marketing space. Internal and external sources of data are being collected in the cloud, and this information is being leveraged by sales and marketing groups to improve speed, efficiency, and effectiveness in reaching customers, including both healthcare providers and patients. As an industry, life science lags behind its counterparts in other industries such as retail and financial services in digital transformation of business processes, but great strides are being made, especially with the help of technology vendors that have expertise in transforming business processes at life science companies, leveraging digital competencies in areas such as cloud computing, mobility, IoT, advanced analytics, and artificial intelligence (AI).

In 2020, the life science industry and the vendors that serve it have had to accelerate the pace of digital transformation to contend with the COVID-19 pandemic and associated changes in work. Healthcare providers (HCPs) have moved even faster toward digital channels to receive critical information on diseases and therapies to address the need for physical distancing and limits on personal calls by field sales professionals. Patients have increasingly engaged in telehealth visits, and many life science company employees have had to adopt to a work-from-home scenario. The life science industry has responded with enthusiasm to these new modes of work while accelerating efforts to develop therapies and vaccines in record time.

To help life science companies better evaluate the vendors in this space, in this IDC MarketScape, we evaluate the capabilities of several prominent providers of consulting and services in the areas of digital transformation in life science sales and marketing, including those that transform sales and marketing operating models, leadership, work sources and collaboration, omni-channel optimization, and new ways of collecting, aggregating, and analyzing digital information. When evaluating these vendors, the key criteria companies should consider (all of which are discussed in this study) include:

- Breadth of experience and offerings in life science sales and marketing digital transformation efforts and the number of customers the vendor has served
- Geographic footprint and global delivery capabilities, level of priority, and focus by the vendor on the life science sales and marketing sector, including the pace of sector investment by the vendor
- Life science industry expertise, corporate financial stability, and the size and experience of global life science delivery teams

- Thorough vetting of customer references to evaluate vendor capabilities in project management, IT technical skills, account management, and overall value delivery to clients

## IDC MARKETSCOPE VENDOR INCLUSION CRITERIA

---

IDC frequently has unique visibility into vendor selection processes within life science companies through clients and contacts in the industry. For a vendor to be considered for inclusion in this study, the vendor's services must have been significantly evaluated for purchase within recent contracts with which IDC is familiar. Further research and due diligence were then conducted to narrow the list of vendors to only those that fulfilled the following qualifying criteria:

- Significant marketplace presence in life science sales and marketing digital transformation services, including such work at large (>\$1 billion annual revenue) biopharmaceutical firms for at least the past five years
- Delivery of technology solutions to the life science industry including cloud strategy, mobile solutions, social data, and analytics/AI
- Global life science customer base and delivery network
- A documented vertical life science industry practice
- Demonstrated success in one or more of these digital transformation categories in life science sales and marketing:
  - Leadership transformation
  - Multichannel transformation
  - Operating model transformation
  - Worksource transformation
  - Information transformation

## ADVICE FOR TECHNOLOGY BUYERS

---

Digital transformation in life science sales and marketing holds great promise for improving life science companies' financial performance, customer satisfaction (patient as well as doctor), and sales and marketing effectiveness.

Life science companies are increasingly looking for vendors that can combine deep industry expertise with global delivery capabilities. Successful vendors in this space must demonstrate:

- Deep, proven industry-specific expertise, with a strong book of references
- Proven understanding of industry regulations and compliance standards
- Willingness to provide dedicated resources onsite on an ongoing basis across sequential digital projects to maintain acquired best practices

Buyers should:

- Determine whether vendor teams are organized vertically (life science). This will ensure that vendor leadership is aligned with industry-specific needs and that future development will be aligned with life science industry needs.
- Consider each vendor's breadth of service offerings, especially in the sales and marketing space; pricing flexibility; and willingness to share risk for project outcomes.

- Be sure that functional and technical requirements are signed off by all stakeholders within your organization by involving them early in the specification process.

## VENDOR SUMMARY PROFILES

---

This section briefly explains IDC's key observations resulting in a vendor's position in the IDC MarketScape. While every vendor is evaluated against each of the criteria outlined in the Appendix, the description here provides a summary of each vendor's strengths and challenges.

### IQVIA

IDC has positioned IQVIA in the Leaders category within this 2020 IDC MarketScape on worldwide life science sales and marketing digital transformation services.

IQVIA was established in 2016 with the merger of IMS Health (founded 1954) and Quintiles, a contract research and services organization founded in 1982. IDC estimates that IQVIA derives about 70% of its revenue from the life science industry, with about 30% of this revenue coming from the sales and marketing areas. In 2017, IQVIA acquired HighPoint Solutions, a service provider specializing in life science sales and marketing engagements. Further:

- **Life science employees:** Over 25,000 (including 1,100+ at HighPoint)
- **Total life science customers (current, 2020):** 275+
- **Life science sales and marketing digital transformation projects started/completed:** >300
- **Global support:** 125 offices, all major regions
- **Industry focus:** Highly concentrated in life science sales and marketing

### Strengths

IQVIA has a major presence in life science sales and marketing through OneKey provider reference solutions, prescription data solutions, Orchestrated Customer Engagement (OCE), a CRM and multichannel engagement platform for the life science industry, and several other life science data and consulting practices, in addition to HighPoint. IQVIA employs over 1,300 medical doctors and almost 2,000 epidemiologists and real-world evidence (RWE) and real-world insights (RWI) experts. IQVIA is well positioned to leverage its data and analytics capabilities with a growing suite of software platforms and services.

### Challenges

Although IQVIA has a major presence in data and software for the industry, the company has a relatively small consulting and service provider/integrator workforce, which in addition to HighPoint includes approximately 4,500 employees of IQVIA's Technology Solutions Delivery team. IQVIA has built a consulting group of several thousand life science professionals and is committed to strengthening the team in areas that will provide the most value to clients based on their evolving business needs. IQVIA may leverage its data and software platform strength into growth in life science industry integration project business.

## APPENDIX

---

### Reading an IDC MarketScape Graph

For the purposes of this analysis, IDC divided potential key measures for success into two primary categories: capabilities and strategies.

Positioning on the y-axis reflects the vendor's current capabilities and menu of services and how well aligned the vendor is to customer needs. The capabilities category focuses on the capabilities of the company and product today, here and now. Under this category, IDC analysts will look at how well a vendor is building/delivering capabilities that enable it to execute its chosen strategy in the market.

Positioning on the x-axis, or strategies axis, indicates how well the vendor's future strategy aligns with what customers will require in three to five years. The strategies category focuses on high-level decisions and underlying assumptions about offerings, customer segments, and business and go-to-market plans for the next three to five years.

The size of the individual vendor markers in the IDC MarketScape represents the market share of each individual vendor within the specific market segment being assessed.

### IDC MarketScape Methodology

IDC MarketScape criteria selection, weightings, and vendor scores represent well-researched IDC judgment about the market and specific vendors. IDC analysts tailor the range of standard characteristics by which vendors are measured through structured discussions, surveys, and interviews with market leaders, participants, and end users. Market weightings are based on user interviews, buyer surveys, and the input of IDC experts in each market. IDC analysts base individual vendor scores, and ultimately vendor positions on the IDC MarketScape, on detailed surveys and interviews with the vendors, publicly available information, and end-user experiences in an effort to provide an accurate and consistent assessment of each vendor's characteristics, behavior, and capability.

### Market Definition

For the purposes of this study, digital transformation in life science sales and marketing includes all process design, system design, platform design, system selection assistance, go-to-market strategy, management consulting, regulatory compliance consulting, enterprise technology strategy or transformation, and other related services that utilize or combine digital information or processes such as AI and analytics, cloud computing, mobile technology solutions, social data, internal or external data for healthcare providers, prescription data, and key opinion leaders for the purpose of improving sales and marketing processes in life science companies.

### Synopsis

This IDC study provides an assessment of 14 vendors participating in digital transformation of sales and marketing processes in the life science industry. Digital transformation is occurring at a rapid pace in life science companies, including in the sales and marketing space. Internal and external sources of data are being collected in the cloud, and this information is being leveraged by sales and marketing groups to improve speed, efficiency, and effectiveness in reaching customers, including both healthcare providers and patients. Tools such as AI, advanced analytics, and orchestration of multiple tasks and roles utilizing data from multiple sources are accelerating change in 2020 and beyond.

Mike Townsend, research director for Life Science Commercial Strategies at IDC Health Insights, says, "Life science companies are embracing digital transformation efforts within sales and marketing, which can connect stakeholders such as sales representatives, marketing and medical affairs executives, doctors, patients, and payers using a wide variety of digital technologies, including AI, cloud computing, mobile technology, and social media and analytics, and leveraging a host of internal and external data sources. Life science companies will continue to see improved outcomes, growth, and productivity as they use these technologies to learn about and predict doctor and patient behaviors and preferences."

## About IDC

International Data Corporation (IDC) is the premier global provider of market intelligence, advisory services, and events for the information technology, telecommunications and consumer technology markets. IDC helps IT professionals, business executives, and the investment community make fact-based decisions on technology purchases and business strategy. More than 1,100 IDC analysts provide global, regional, and local expertise on technology and industry opportunities and trends in over 110 countries worldwide. For 50 years, IDC has provided strategic insights to help our clients achieve their key business objectives. IDC is a subsidiary of IDG, the world's leading technology media, research, and events company.
